IBM PC DAY

EPIC Aug 12

August 12, 1981: IBM introduced the personal computer. Before that date, computing was institutional. After it, the terminal was yours. LOT is a direct descendant of that decision.

T.◆.T

TURING KEY

EPIC · [HIDDEN]

Alan Turing (1912-1954) asked whether a machine could think. He also cracked Enigma, shortening WWII by years. Every AI, every chatbot, every language model exists in the universe he imagined. Write his name.

L.●.L

LOVELACE SIGNAL

MYTHIC · [HIDDEN]

Ada Lovelace (1815-1852) wrote the first algorithm for a machine that did not yet exist. She was 27 years old. The first programmer. She understood the Analytical Engine could manipulate symbols – a century before anyone else. Write her name.

W.∞.W

WELLS TEMPORAL

RARE · [HIDDEN]

H.G. Wells published *The Time Machine* in 1895. He invented time travel as a narrative technology before the physics existed to theorize it. Every science fiction story about time is a footnote to Wells. Every self-care retrospective is time travel. Write "time machine."

FLAVOR TEXT

"You don't manage time. You inhabit it. Self-care is the practice of inhabiting time well."

"Uptime is the metric that tells you how long a system has been reliably operational. Your streak is your uptime. The system that has been 'up' the longest is you."

"Ada Lovelace wrote the first algorithm for a machine that didn't exist yet. That is what journaling is – writing the code of a future self into existence."

"A cron job runs on schedule, without being watched, without being reminded. The practice that runs without being started is the practice that has become part of the system."

"H.G. Wells' time traveler moved forward to the year 802,701. You move forward one day at a time. The machine is the practice. The time traveler is you."

"A vestige is a trace of something that was once larger. Your old patterns are vestiges. The diff between who you were and who you are is not loss – it is version history. You can read it."
