

LOT NODE

Quick Start · v1 · 2026-09-06

LOT Node is the physical companion to your Memory Engine on lot-systems.com. It shows short, autonomous notifications from your System, and lets you log a moment back with a single press.

1 What's in the box

- LOT Node (stainless steel, 40×40mm)
- Qi wireless charging puck
- USB-C cable
- This card

2 Charge it

Plug the charging puck into any USB-C power source. Rest LOT Node on the puck, polished side down. The status light glows while charging and turns off when full.

3 Pair it

- Hold the button for 3 seconds until a QR code appears on screen.
- Scan it with your phone's camera app.
- Follow the link to select your Wi-Fi network and sign in to your LOT account.
- The screen shows a checkmark once paired.

4 What it does

- **Screen** — shows short notifications from your Memory Engine, e.g. “Coffee time!”
- **Button (“Copy”)** — one press logs the moment to your Log tab on lot-systems.com
- **Sensor** — reads ambient temperature, humidity and pressure in the background

5 Need help?

Email support@lot-systems.com, or see the full manual at lot-systems.com for setup troubleshooting and specifications.

This is a planning-stage document produced before a physical prototype exists. Photography and final packaging copy will replace this text in a future revision.
