Owner's Manual · Version 1 · LOT Systems Corporation

Owner's Manual — v1

LOT Systems Corporation · Made in the USA · brand.lot-systems.com

What's in the box

- 1x COSMO® SLATE unit (polished stainless steel, 40 x 40 x 5mm face)
- 1x Qi wireless charging puck
- 1x Quick-start card

The full manual (this document) is provided as a PDF — nothing extra to print or keep track of.

What COSMO® SLATE does

SLATE is a small steel object that sits on your desk and shows you one short message at a time — sent from your LOT® Systems account (lot-systems.com) when there's something worth knowing. It has one button.

Pressing it sends a signal straight to the **Log** tab on your LOT account, the same as if you'd typed a log entry yourself.

That's the whole device. One line in, one button out.

Setup

- **Charge it.** Place SLATE face-down on the charging puck. A soft glow under the base confirms it's charging.
- **Power on.** Lift SLATE off the puck once charged. The display wakes and shows a short pairing code.
- **Connect Wi-Fi.** On your phone or laptop, open Bluetooth settings,

find "COSMO SLATE," and follow the prompt to hand it your home Wi-Fi network. You only do this once.

- **Pair with your account.** On lot-systems.com, go to **Settings** → **Hardware** → **Pair a device**, and enter the code shown on SLATE's screen.

- **Done.** SLATE will show "Paired" briefly, then go quiet until it has something to say.

Using SLATE

The screen. SLATE stays blank — a polished steel mirror — until your LOT account has something worth telling you. When it does, one line appears: something like `"Coffee time!"` or `"Memory question ready."` It stays until you either act on it or a new message replaces it.

The button. One press sends **Copy** — a signal that shows up in your **Log** tab on lot-systems.com, timestamped, exactly like a note you wrote yourself. Use it however makes sense to you: to mark that you saw the message, that you're stepping away, or just to check in.

Turning it over. The polished side has no controls — it's meant to sit face-up as a quiet object until you need it. Flip it to the working side (camera, screen, button) any time.

Charging

SLATE charges wirelessly on its puck. A full charge lasts roughly 4-5 days of typical use (6-10 messages a day). There's no cable to plug into the device itself — just set it back on the puck when the display starts running low.

Weather awareness

SLATE has a small onboard sensor that reads temperature, humidity, and

air pressure near your desk. This feeds into the messages it shows you — for example, a heads-up about rain — and into your LOT account's broader picture of your day. It never leaves your desk data anywhere public.

Privacy — what the camera does and doesn't do

SLATE has a small camera on its working face. It is used only to sense whether someone is at the desk and how bright the room is, so messages show up when you're actually there to see them. **It does not record or transmit video.** No raw image ever leaves the device — only a simple "someone's here" / "room is bright" signal, sent alongside the weather data.

Troubleshooting

Problem	Try this
Screen stays blank	Confirm it's charged — place on the puck for 10 minutes, then check
Won't connect to Wi-Fi	Re-run step 3 of setup; confirm your network is 2.4GHz (SLATE doesn't use 5GHz Wi-Fi)
Button press doesn't show in Log tab	Check Settings → Hardware — the device should show "Paired" and "Last seen: recently"
Battery draining faster than expected	Return it to the charging puck more often; report the pattern in Settings → Hardware → Feedback so a future firmware update can improve it

Specifications

Body	304 stainless steel, two-piece, bonded seam
Face A	Polished mirror finish, 40 x 40 x 5mm
Face B	Camera, 1.28" round display, single button
Display	240x240 round IPS, single-line text
Camera	2MP, fixed focus, presence/light sensing only – no recording
Sensors	Temperature, humidity, barometric pressure
Battery	~4-5 days typical use per charge
Charging	Qi wireless, included puck
Connectivity	Wi-Fi (2.4GHz) + Bluetooth (setup only)
Weight	Under 60g

Support

Questions, feedback, or a pattern you'd like SLATE to learn — reach out through Settings → Hardware → Feedback on lot-systems.com, or support@lot-systems.com.
