

COSMO® TERMINAL — MODEL T-1

OPERATOR MANUAL · LOT SYSTEMS CORPORATION

Document: LOT-COSMO-COMPUTER-MANUAL · Class: RESTRICTED // S-2 EYES

Inventor: Vadik Marmeladov, COSMO® CIA · 2026-08-29

01 // WHAT THIS IS

The COSMO® Terminal is a small stainless-steel object that shows you one message at a time, sent by the AI running lot-systems.com. It is a pager, not a computer you operate – you read it, and if you want the moment kept, you press one button.

02 // IN THE BOX

1x COSMO Terminal (T-1)	70mm diameter puck
1x COSMO Dock (charger)	40mm x 40mm x 5mm stainless plate
1x USB-C cable	Dock charging + first-time setup
1x Quick-start card	

03 // THE TWO FACES

FACE A (mirror-polished)	No controls. Rest the Terminal this side up when you want it out of the way.
FACE B (matte, instrument)	Camera, round display, one button: COPY. Rest the Terminal this side up to read it.

04 // FIRST-TIME SETUP

STEP 1 – Charge

Set the Terminal on the Dock, Face A up. The Dock charges it wirelessly. Plug the Dock into power with the included USB-C cable.

STEP 2 – Install the Bridge

Install the LOT Bridge companion app and sign in with your existing lot-systems.com account. No new account is created.

STEP 3 – Pair

In the Bridge app, choose "Pair a Terminal." Flip the Terminal to Face B – it will show "PAIR ME." The Bridge finds it automatically. When pairing succeeds, the Terminal displays: "COSMO Terminal paired."

STEP 4 – Place it

Set the Terminal, Face B up, wherever you want to see your notifications – a desk, a shelf. Leave the Dock where it can stay powered; you do not need to keep the Terminal sitting on the Dock once paired.

05 // READING A NOTIFICATION

When lot-systems.com's AI has something for you – a reminder, a nudge, something as small as "Coffee time!" – the Terminal's display lights up with that message. It stays until you acknowledge it or a new one replaces it. There is no sound, no banner, no phone lock-screen interruption – the same design choice LOT makes across its notification hardware: present, not demanding.

06 // THE COPY BUTTON

Press COPY while a message is showing, and that exact message – with the time it appeared and the time you pressed – is written into your Log tab at lot-systems.com/log. Nothing else the Terminal does reaches the site without this button. Pressing COPY is how you tell LOT: keep this one.

07 // CHARGING

Set the Terminal on the Dock, either face up – the Dock charges through contact, not through a specific orientation. A full charge from empty takes a few hours on the Dock's wireless coil; if you are in a

hurry, the Dock's USB-C port also accepts a direct cable for the Terminal's first charge and any firmware update.

08 // WHAT THE TERMINAL DOES NOT DO

- It is not a phone. It does not ring, browse, or run apps.
- It does not reply to a message beyond the one COPY button.
- It does not work without the paired Bridge app running somewhere on your phone or computer – the Terminal has no direct internet connection of its own.

09 // TROUBLESHOOTING

Display stays blank	Check the Dock is powered; place Terminal on Dock for 10 minutes, then retry.
No notifications arrive	Confirm the Bridge app is running and signed in; check pairing status in Bridge.
COPY press not in Log tab	Confirm your Device Pairing Token has not been revoked in LOT account settings.
