

COSMO® Terminal

Operator Manual

V1.0 PILOT UNIT — 100-UNIT RUN | LOT SYSTEMS CORPORATION

What this is

COSMO® Terminal is a small stainless-steel device that sits on your desk, charges wirelessly, and shows you one short message at a time from lot-systems.com — the way a pager once did, without a feed, without a badge count, without a screen that's ever lit unless there's something to say.

It has one button: **Copy**. Pressing it saves whatever the device is showing into your Log on lot-systems.com, so a passing notification becomes something you can find again later.

In the box

- 1× COSMO® Terminal (stainless steel, two-part body)
- 1× Wireless charging pad
- 1× Quick-start card

Getting to know the device

COSMO® Terminal has two faces:

- **The polished face** — mirror-finish stainless steel, no markings. This is the resting face. When you're not expecting a notification, this side faces up.
- **The instrument face** — matte stainless steel. This side carries the screen, the camera, and the Copy button. When a notification is expected, this side faces up.

You can tell which face is which by touch alone — polished vs. matte — without needing to look.

Setup

- **Place the device on the charging pad.** Either face down works for charging; the coil is centered in the base.
- **Wait for first boot.** The screen will display a 6-character pairing code.
- **On lot-systems.com, go to Settings → Connect COSMO® Terminal**, and enter the code shown on the device. COSMO® Terminal requires an eligible LOT Usership profile (Yellow-tier Benchmark or above) to pair. If pairing is refused, your account may not yet meet this threshold — this is by design, not an error.
- **Pairing complete.** The screen goes blank. This is normal — the screen is only ever lit when there's a message.

Using COSMO® Terminal

Receiving a notification

When lot-systems.com has something worth telling you — a self-care nudge, a weather-linked reminder, a milestone — the screen lights with one short line, for example:

“Coffee time.”

The message stays on screen for 8 seconds, then the screen goes dark again.

COSMO® Terminal will show you at most one message every 15 minutes, and no more than 12 in a day. If it seems quiet, that's the device working correctly — it is built to say less, not more.

The Copy button

- **Press Copy while a message is showing** — that exact message is saved to your Log on lot-systems.com, timestamped to the moment you pressed it.
- **Press Copy while the screen is blank** — the device saves a manual check-in to your Log, using its own sensors (temperature, light) at that moment.
- A quick screen flash confirms every press. No sound.

The weather sensor

COSMO® Terminal reads temperature, humidity, and pressure from wherever it sits and quietly feeds that into your weather-linked notifications on lot-systems.com — you don't need to do anything for this to work.

The camera

The camera takes a single still frame only when you press Copy with a blank screen, or when a notification specifically calls for it. It never records video, never streams, and the image itself is never stored or sent anywhere — only what the device concludes from it (for example, “desk, dim, alone”) is ever used. There is no way to view a saved photo from COSMO® Terminal, because none is ever saved.

Charging

Set the device on its wireless charging pad. A full charge from empty takes several hours; COSMO® Terminal is designed to live on the pad between uses rather than be carried, and a full charge should comfortably last 72 hours or more of normal notification use.

Care

- Wipe the polished face with a soft, dry cloth. Fingerprints on a mirror finish are normal — this is not a defect.
- Do not submerge. COSMO® Terminal is not rated for water exposure.
- The matte instrument face can be cleaned the same way; avoid abrasive cleaners near the screen and camera window.

Unpairing

From lot-systems.com Settings, select “Disconnect COSMO® Terminal.” The device will return to pairing mode (a new code on screen) within a few seconds. Unpairing does not erase your Log history — only future entries stop.

This is a pilot unit

You are one of 100 operators with this device. It is a v1.0 pilot run, not a finished retail product — its firmware will update automatically (only while on the charging pad, never mid-notification), and its behavior may be refined based on what this pilot run learns. If something seems wrong, that observation matters — this is exactly the phase where it's useful to notice.
