

LOT® Computer

Quick Start Manual — v1.0 Pilot

What it is

A small stainless steel object for your desk. One face is mirror-polished stainless — that's the charging face. The other face carries a screen, a small camera, and one button marked **COPY**.

It receives short messages from lot-systems.com — “Coffee time!” and the like — and lets you send a moment back with a single press.

In the box

• 1x LOT® Computer (40mm × 40mm × 5mm)

• 1x Wireless charging puck

• 1x manual

Setup

1. Charge it

Place the device mirror-face-down on the charging puck. There is no port and no cable that connects to the device itself — only the puck plugs in. A full charge from empty takes a few hours; the device is designed to live on the puck most of the time, not to be carried like a phone.

2. Pair it

On first power-up, the screen shows a short pairing code. At lot-systems.com, go to **Settings** → **Devices** → **Pair a device** and enter the code. Pairing is one-time — the device remembers your account after this step.

3. Let it sit

Once paired, place the device wherever you'd notice it without it demanding attention — beside a keyboard, under a monitor, on a shelf at eye level. When lot-systems.com has something short and timely to tell you, it appears on the screen. The screen holds that message even if the device loses power, so you won't miss it by glancing over later.

4. Use COPY

Press the button once to capture the moment — what you're looking at, what you're doing, a thought worth keeping. The device takes a quiet photo and sends it, with a timestamp, straight to your **Log** tab at lot-systems.com. There's nothing to open on the device itself — check your Log tab the way you always do.

One press. One meaning. That's the whole gesture vocabulary.

Care

• The mirror face will show fingerprints — that's the charging contact face, meant to be handled and set back down often. A soft cloth restores the finish.

• The matte face (screen, camera, button) should not be submerged or run under water — the device is not rated for immersion.

• There is no user-serviceable part inside. The two stainless halves are not meant to be separated by the owner.

If something's not right

Symptom	Try this
Screen shows nothing after charging	Confirm the mirror face is flat against the puck — slight misalignment can prevent charging
COPY press doesn't appear in the Log tab	Check the device is still paired under Settings → Devices; re-pair if it shows as “revoked”
No notifications ever arrive	Confirm the device shows “active,” not “provisioning,” under Settings → Devices

What LOT® Computer is not

It is not a phone. It has no apps, no browser, and no notifications beyond the short messages lot-systems.com sends it. That's deliberate — the whole point of the object is to say less, not more.
