

LOT COMPUTER

Quick Reference Manual — Rev A (Pilot, 100 units)

Made in the USA. LOT® Founded 7 April 2016. © 2025-2026 LOT Systems.

WHAT IT IS

LOT COMPUTER is a small stainless steel object that sits on your desk. It has two faces. One is a mirror. The other has a camera, a screen, a sensor grille, and one button.

It does not run apps. It does not need to be opened. It receives one line at a time from your LOT account and shows it on the screen — the way a pager used to print a page. Then it goes quiet again.

IN THE BOX

- LOT COMPUTER unit (42 × 42 × 11mm, polished/matte 304 stainless)
- Wireless charging dock (matching stainless puck)
- This manual

SETUP

- Place LOT COMPUTER on the charging dock. The status glyph appears on the instrument face when it has power.
- On lot-systems.com, open **Settings** → **Devices** → **Pair a LOT COMPUTER**.
- A QR code appears on your screen. Hold LOT COMPUTER's camera face toward it, roughly 15–20cm away, until the glyph confirms.
- Pairing is complete. The device is now bound to your account only.

DAILY USE

The screen. Blank by default. When your LOT account has something to tell you — “Coffee time!”, a weather note, a reminder — one line appears. It stays until the next line replaces it. There is nothing to scroll, nothing to dismiss.

The COPY button. Press it any time you want to mark the moment. It writes a single entry to your Log on lot-systems.com — the same Log your web app already keeps — with the time, your local temperature and humidity, and the device's battery level. Nothing is typed. The gesture itself is the entry.

The sensor grille. Reads temperature, humidity, pressure, and whether someone is nearby — nothing is recorded locally, and nothing leaves the device except through the two paths above (a screen update in, a COPY press out).

The camera. Used only for setup pairing and, if you turn it on in Settings, an optional one-shot “Visual Log” — a single photo, on request, uploaded once. It is off otherwise. It never streams and never records video.

CHARGING

Set LOT COMPUTER face-down or face-up on its dock — either face; the coil is centered so orientation doesn't matter. A full charge from empty takes several hours depending on dock wattage; typical daily top-up is much shorter. There is no on/off switch — the device sleeps between notifications and wakes itself.

CARE

- &b011a Face A (the mirror) is polished stainless. Clean with a soft cloth; avoid abrasives, which will dull the polish permanently.
- &b011a Face B (the instrument face) is bead-blasted and more forgiving of everyday handling.
- &b011a The device is splash-resistant (IP54 target), not submersible. Do not immerse it.
- &b011a No user-serviceable parts inside. The four closure screws are for factory service only.

IF IT STOPS RESPONDING

- &b011a Confirm it has charge (place on the dock; wait for the status glyph).
- &b011a Confirm your home Wi-Fi is online — LOT COMPUTER needs your network to reach lot-systems.com; it does not use cellular data.
- &b011a Re-pair from **Settings** → **Devices** if it was moved to a new network or account.
- &b011a If none of the above resolves it, contact support@lot-systems.com with the device ID printed on the underside of the charging dock (LOT-COMPUTER-00xx).

WHAT THIS DEVICE DOES NOT DO

It does not listen. There is no microphone. It does not watch — the camera fires only for setup and an explicit opt-in photo you request. It does not need an app open to work, and it does not work at all without your LOT account behind it — it is a terminal for your account, not a standalone gadget.
