

COSMO® Cube — Quick Start & Assembly Manual

Hardware Computer, v1.0 Pilot Run (100 units) · Prepared 2026-08-24 · brand.lot-systems.com

What This Is

The COSMO® Cube is a small, standalone hardware computer that receives short, autonomous notifications pushed from lot-systems.com (for example, “Coffee time!”) and displays them on a round screen. A single button, labeled COPY, sends one signal back to your Log tab on lot-systems.com — a physical acknowledgment gesture, not a keyboard.

It is distinct from the LOT® Quantum Cube (CUBIQ™), which is a notification-only object that moves. The COSMO® Cube does not move — it is a computer with a camera, a screen, a weather sensor, and one button.

In the Box

- COSMO® Cube (2-piece 304 stainless steel body, ~50 x 50 x 18mm)
- Qi wireless charging puck
- This manual

Physical Layout

Face	Finish	Contents
Face A	Mirror-polished stainless	Charging contact face — rests on the Qi puck. No aperture.
Face B	Brushed stainless	1.28" round display, camera, single COPY button.

Setup — 4 Steps

1. **Charge.** Place Face A (polished) flat on the Qi charging puck. The device wakes automatically on first power.
2. **Pair.** Open the pairing page on lot-systems.com while logged into your account. The Cube advertises a Bluetooth pairing signal for 5 minutes after first power-on.
3. **Connect.** Enter your Wi-Fi network when prompted on the pairing page. Credentials are sent to the device only over the encrypted Bluetooth pairing link, never over an open network.
4. **Confirm.** The Cube's screen shows a single checkmark once paired, then goes idle. It is now ready to receive notifications.

Using the COPY Button

When a notification is on screen, pressing COPY writes one entry to your Log tab on lot-systems.com and clears the screen. One press, one signal — there is no long-press or double-tap gesture in v1.0.

Privacy

The camera is used only for an on-device presence check before a low-priority notification wakes the screen, so the Cube does not light up to an empty room. No camera frame is ever stored or transmitted off the device, in any firmware version.

Care

Wipe the polished face with a soft cloth. Do not immerse. Battery life is approximately 6–8 hours of active display use, or several weeks on standby between charges at typical notification frequency.
