

LOT® Pager – Quick-Start Manual (Source)

Document: LOT-PAGER-MANUAL.md

Classification: Public – Ships in box / PDF

Prepared: July 2, 2026

PDF output: `docs/technical/pdf/LOT-PAGER-QUICKSTART-MANUAL.pdf`

Generator: `scripts/generate\_pager\_manual\_pdf.py`

*Per Hardware Spec build order (Section 05, step 10): this manual must be regenerated from **as-shipped** hardware before the 100-unit pilot run ships, not left as a spec-stage draft. This version describes the EVT/DVT design intent and is a placeholder for that final pass.*

What's in the Box

- 1x LOT® Pager (stainless steel, two-piece shell)
 - 1x Qi wireless charging puck
 - 1x quick-start card (this document, condensed)
-

1. Charge It

Place LOT® Pager on the charging puck, polished side down. A single flash on the display confirms charging has started. Full charge from empty takes a few hours; the device is usable while charging.

2. Pair It

1. Open lot-systems.com on your phone or computer and sign in.
2. Go to Settings → Hardware → LOT® Pager → Pair a device.
3. Hold the button on your Pager for 3 seconds until it flashes twice.
4. Follow the on-screen steps. Pairing takes under a minute.

3. Wear It, Carry It, or Set It Down

LOT® Pager works anywhere in range of your home WiFi. Clip it, pocket it, or leave it on your desk face-up.

4. Receive

When lot-systems.com has something worth telling you, LOT® Pager shows one line – **"Coffee time!"**, a streak reminder, a weather note – then goes dark. No app to open.

5. Press Copy

The single button on the front is labeled Copy. Press it any time – to

acknowledge a message, or just to check in. It sends a signal straight to your Log tab on lot-systems.com.

6. Care

- Polished face: wipe with a soft cloth. It will show fingerprints — that's stainless steel, not a defect.
- Water: splash-resistant (IP54 target). Not for swimming or diving.
- Camera: off unless you hold the button for 2+ seconds. A light confirms when it's live. Captured photos stay on the device until you choose to attach one to a Log entry in the app.

7. Battery

Target: 5-7 days per charge under normal use. Battery percentage is visible in Settings → Hardware → LOT® Pager.

8. Support

Questions: see lot-systems.com/about. This device is built and supported by LOT Systems, Inc. — the same team behind the software you already use.

*LOT® Pager. One line. One button. Built in stainless steel to last.
LOT Systems, Inc. — Los Angeles, CA. Made in the USA.*
