

COSMO® Cube

User Manual — v1.0

LOT®† COSMO® — a hardware companion for lot-systems.com

Welcome

COSMO® Cube is a small stainless-steel computer that sits on your desk. It shows you one short message at a time — a nudge from your LOT® Systems Memory Engine, like “Coffee time!” — and it has one button: **COPY**. Press it, and a note appears instantly in your Log tab on lot-systems.com.

That's the whole device. No app to check, no feed to scroll. A pager for a life you're already building on LOT®.

What's in the box

- 1× COSMO® Cube (40mm × 40mm × 5mm, stainless steel)
- 1× wireless charging puck + USB-C cable
- 1× quick-start card

The two faces

Polished face (back): mirror-finished stainless steel. This is the side that rests on the charging puck.

Front face: satin-finished stainless steel, with three openings:

Element	Location	Function
Camera	top-left	presence check + operator-triggered snapshot
Screen	center	shows your current message
COPY button	bottom edge	logs a note to your Log tab

Setting it up

- 1. Charge it.** Set the Cube face-down (polished side down) on the charging puck. The screen will show *Charging...* briefly.
- 2. Pair it.** On your phone, open lot-systems.com/settings and tap **Pair COSMO Cube**. Scan the code shown on your phone with the Cube's camera, or hold your phone near the Cube (Bluetooth) and follow the prompts.
- 3. Choose your Wi-Fi.** Enter your home Wi-Fi password once, on your phone — the Cube never needs a keyboard.
- 4. Done.** The screen will show *Paired.* and then settle into normal operation — blank until your first notification arrives.

Using it

Receiving a message. The Cube checks in with lot-systems.com quietly in the background. When your Memory Engine has something for you — a question ready, a badge unlocked, a weather shift, a simple nudge like “Coffee time!” — it appears on the screen and stays there until the next one. Nothing blinks, nothing chimes. It's there when you look.

Pressing COPY. Press the button any time. The screen briefly shows *Sent.* and a new entry appears in your Log tab on lot-systems.com, timestamped, with your battery level and the message that was on screen. Use it to mark a moment — “I saw this, noted” — without touching your phone.

Weather. The Cube quietly reports the temperature, humidity, and pressure around it back to your profile. No setup needed.

Charging

Set the Cube face-down on the puck any time. A full charge from empty takes about 90 minutes. On typical use, one charge lasts several days — the screen only draws power when a new message arrives, not while holding one.

Care

- Wipe the polished face with a soft cloth; avoid abrasive cleaners.
- Not submersible. Keep away from standing water (dust- and splash-resistant only).
- If the Cube stops responding, hold the COPY button for 10 seconds to factory-reset and re-pair from step 2 above.

Troubleshooting

Symptom	What to try
Screen is blank and stays blank	Check the charging puck is powered; place the Cube back on it for 10 minutes
“Pairing failed” on screen	Confirm your phone's Bluetooth is on and you're within 1 meter during pairing
COPY press doesn't appear in Log tab	Check your home Wi-Fi is online; the Cube will retry automatically once reconnected
Message never changes	This is normal if the Memory Engine has nothing new — the screen holds the last message

Specifications

Dimensions	40mm × 40mm × 5mm
Weight	<60g
Body	316L stainless steel, two-piece
Display	1.54" e-paper, monochrome
Camera	2MP, fixed-focus
Sensors	Temperature, humidity, barometric pressure
Connectivity	Wi-Fi 2.4GHz, Bluetooth (pairing only)
Charging	Qi wireless, 5W puck included
Battery life	Several days typical standby
Water resistance	IP54 (dust/splash-resistant, not submersible)
