

LOT Computer — Quick Start Guide

(Concept-stage manual — written ahead of hardware, to be revised against a real production unit before Phase 4 launch.)

In the box

- 1× LOT Computer (the puck)
- 1× Qi wireless charging dock
- 1× USB-C cable

1. Charge it

Place the puck, polished side down, on the charging dock. A small glyph appears on screen if the puck is already awake; otherwise it simply charges in the background. Give it a full charge before first use.

2. Pair it

- 1 On lot-systems.com, open **Settings** → **Devices** → **Add a device**.
- 2 The puck's screen shows a short pairing code.
- 3 Enter that code on the Settings page.
- 4 Done — the puck is now tied to your account.

3. Place it

Put it somewhere you'll actually glance at — a desk, a nightstand. It has one screen and one job: show you the occasional right-moment nudge from your Memory Engine.

4. Use the button

- **Short press** = **Copy**. Whatever's on screen right now gets written

into your Log tab, instantly.

- **Long press** = take a photo, attached to that same Log entry. The camera

only ever activates on this explicit gesture — never on its own, always with its indicator light on when it does.

5. That's it

No app to install. No account separate from lot-systems.com. It just sits there and, once in a while, says the right thing.
